Acoustic Buoy

Accurate. Simple. Reliable.

The Ocean Sonics Acoustic Buoy provides a portable solution for real-time underwater acoustic monitoring. Designed for drifting or moored deployments, it combines power, wireless communication, and GPS time synchronization to support up to six icListen Smart Hydrophones.

Deployable from a small vessel, the buoy is ideal for marine mammal monitoring, underwater radiated noise measurements, vessel detection, and environmental compliance.

Acoustic Buoy Key Features

Deploy: Flexible drifting or moored configurations for a range of underwater monitoring applications.

Transport: Lightweight, compact design allows easy handling and deployment from small vessels.

Connect: Wi-Fi or radio communication provides remote access to real-time acoustic data.

Synchronize: GPS time synchronization ensures accurate, time-aligned acoustic measurements.

Monitor: Supports up to six icListen hydrophones for simultaneous underwater acoustic monitoring.

Minimize Noise: Acoustically quiet design minimizes interference from water movement and surface motion.
